

My Sustainable Forest

Theme: Digitalisation of forestry management, inventory and monitoring – Aerial inspection and remote sensing services for forest management

1. About My Sustainable Forest

My Sustainable Forest integrates earth observation into daily decision-making processes and operations. Its diverse portfolio is grouped in six forest management services with more than twenty specific products. My Sustainable Forest might have a solution to facilitate your forest tasks. Forest site geo-information products are obtained from remotely sensed data - satellite or LiDAR - in combination with available in-situ data and species-specific measurements.

2. Potential collaborations

- Forest owner(s) associations (of any size), forest managers, timber companies, wood purchasers and agencies responsible for forest inventory, monitoring, reporting and assessment as potential customers. Some services may need that forest managers provide forest data to adjust the outputs to the particular ecological context.
