

ForestHQ

Theme: Digitalisation of forestry management, inventory and monitoring – Mobile applications for forest inventory and monitoring

1. About ForestHQ

The Forest Valuation module of ForestHQ allows simple, automated forest valuation. Dendrometric field data can be collected using the Arboreal App: you will measure trees and perform the forest inventory using your iPhone. Drone survey can be added to improve inventory accuracy. Afterwards, the Forest Valuation module will generate the online mapping of inventories with location-based metrics to support decision making of your assets.
