

Festmeter

Theme: Digitalisation of forestry management, inventory and monitoring – Digital solutions for forest pests and diseases

1. About Festmeter

Festmeter offers vitality analyses with regards to bark beetle detection in conifer forests using satellite imagery. The service is designed to help prevent excessive damage in the forest. Long-standing customers report positive hit rates of over 80%: Festmeter identifies the majority of beetle infestations. Based on the automated reports, the forest managers can take action. Festmeter allows to act faster and more purposefully in the field.
