

Arbonaut ProMS

Theme: Digitalisation of forestry management, inventory and monitoring – Software for planning forest management

1. About Arbonaut ProMS

Arbonaut ProMS is a project management system that is developed with its users for forest operation planning, implementation and monitoring. ProMS is used as light ERP system by SMEs providing forest services, maintaining forest roads or acquiring bioenergy. The service can be customised according to your specific needs. With its easy-to-use web and mobile application, you can easily keep track of your work progresses, storage sites, forest roads, and sub-contractors. ProMS platform can also be used for exploiting and sharing open data, geospatial analysis and monitoring vegetation that can be, for example, further processed to bioenergy.
