

ForestHQ

Theme: Digitalisation of forestry management, inventory and monitoring – Software for planning forest management

1. About ForestHQ

Forest HQ brings together forest valuation, management and harvesting in a single on-line platform. In addition, a new module to manage forest certification is arriving to solve the bureaucratic burden of forest certification. It will allow forest managers to create, fill in and track on-line forms to comply with the certification schemes of their choice (PEFC, FSC and similar), and forward them to required third parties. Another module to assess and track carbon storage in the forest is under development.

2. Potential collaborations

- Treemetrics seeks potential customers for the application, with possibilities of customisation. Pricing is adapted to corporate customers and to individual forest owners.
- Other business collaborations will also be considered.
