

Partnership for Regional Innovation (PRI), Influence on innovation in forest-based sector?

5th Edition Forest Innovation Workshop: The role of innovation in managing new challenges in the forest-based sector at regional level in the EU”

EFI Bioregions Facility

Xabier Goenaga
Head of Unit B7-JRC
18 th January 2023

The right moment

A European Green Deal
Striving to be the first climate-neutral continent

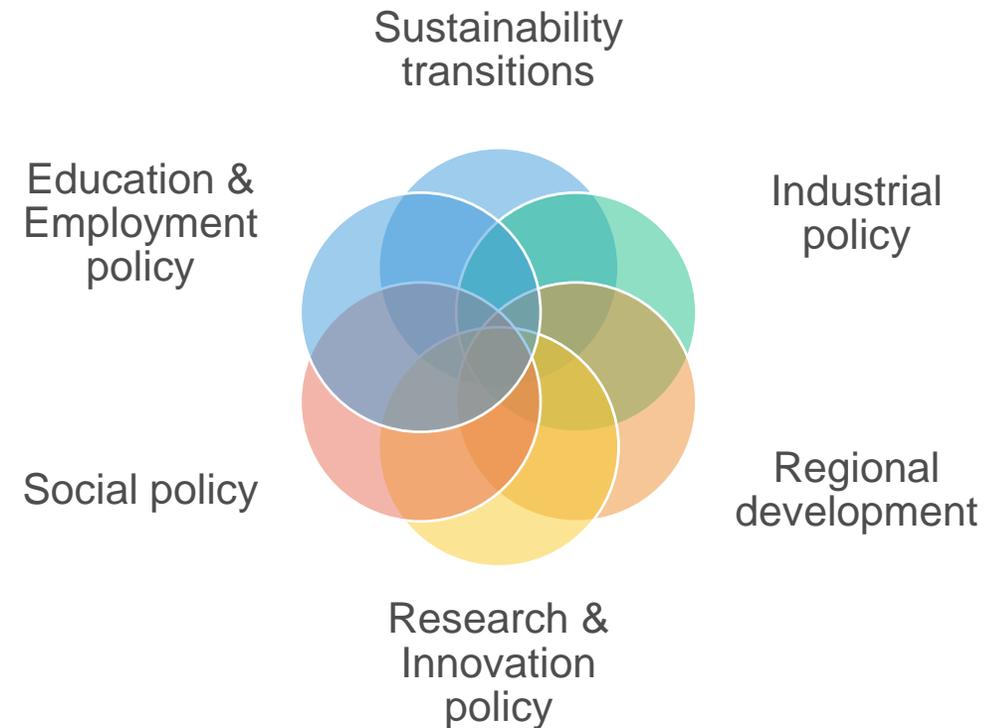

- The implementation of **Green Deal** is indispensable, being **circular bioeconomy** one of its pillars.
- Secure **Europe's position** in the economy of the future
- Confluence of maturing trends:
 - Deep global **transformations in socio-technical systems**;
 - Return of **industrial policy: EU competitiveness through sustainability**; Circular Economy

Partnerships for Regional Innovation

A new strategic approach to innovation-driven **territorial transformation**, based on the experience on Smart Specialisation, linking **EU priorities** with national plans and **place-based** opportunities and challenges

- To mobilise innovation funds beyond ERDF
- To mobilise **other policies** beyond innovation funding to accelerate the green transition
- To connect better regional and EU innovation funding initiatives

PARTNERSHIPS FOR REGIONAL INNOVATION

A new Playbook is out

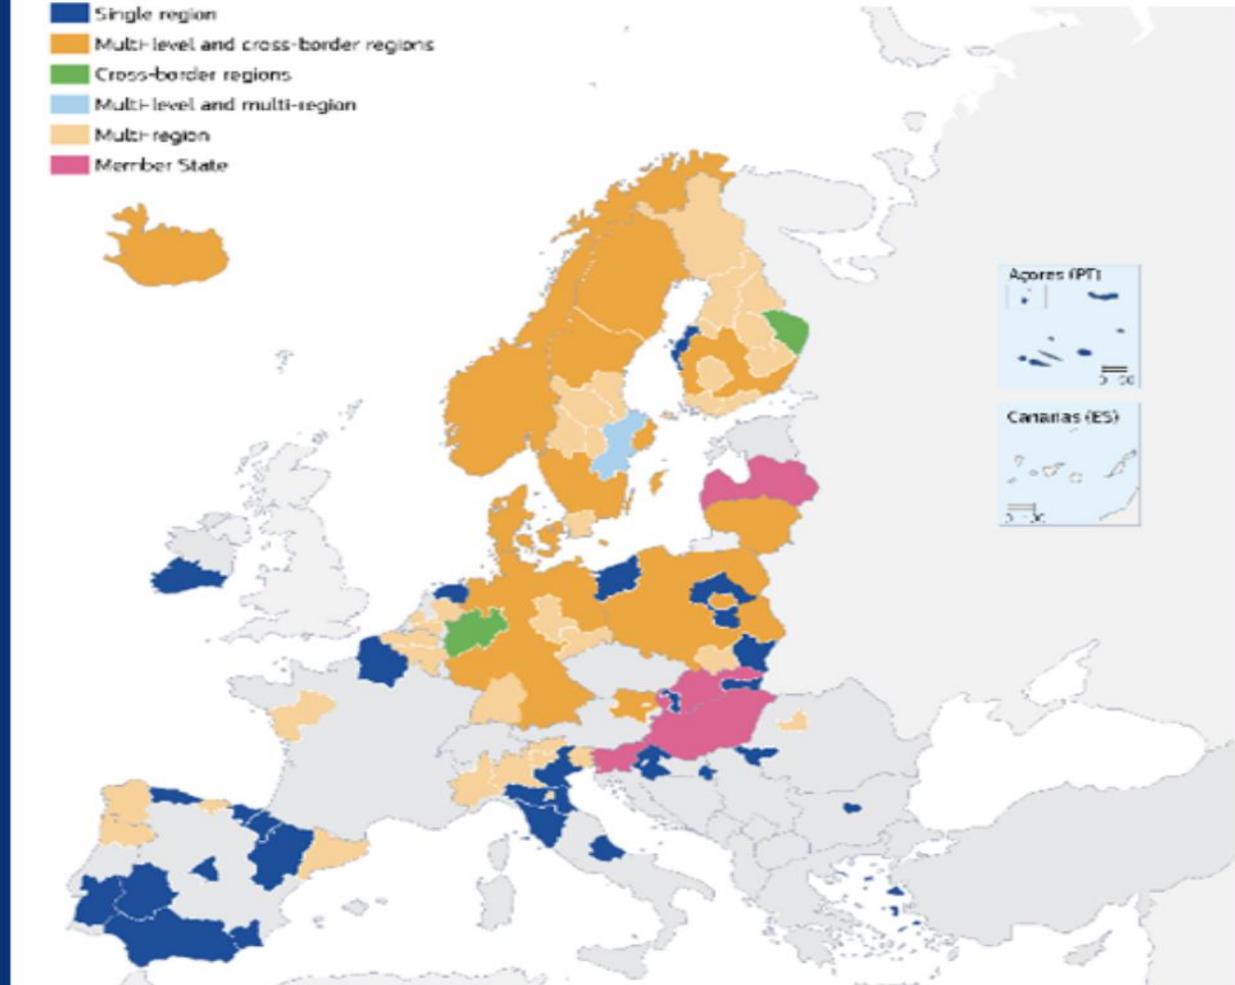

Out 17 May 2022

68 tools to foster innovation for sustainability in territories

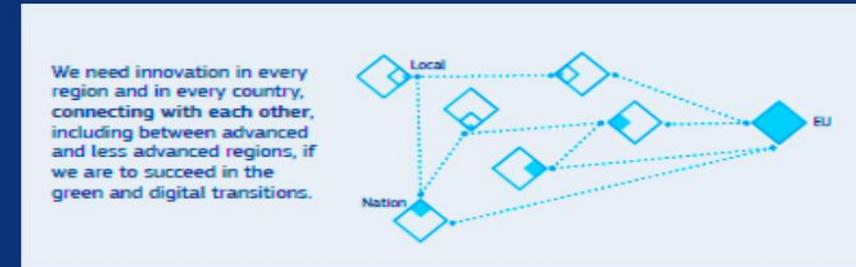

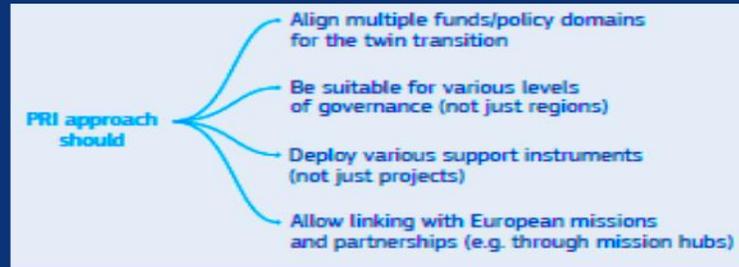

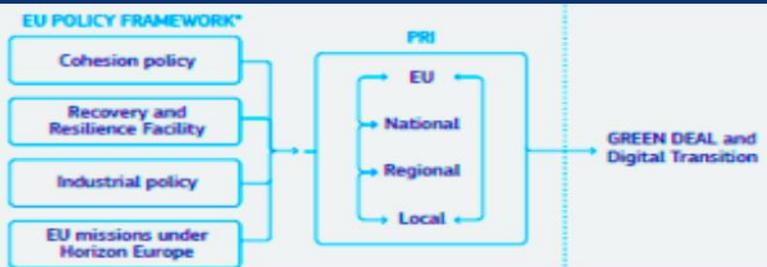

Pilot
(May 2022-June 2023)
74 territories:
7 cities
63 regions
4 Member States

<https://s3platform.jrc.ec.europa.eu/pri>

Key concepts

PRI Playbook

Purpose & Scope

- Document leading thinking and practice on **innovation**
- Initial **guidance** for JRC-CoR Pilot (not prescriptive)
- Facilitate **exploration, experimentation, learning & co-creation**
- **Three building blocks**: initial approach to be co-developed through the pilot
- **Toolbox**, structured around highly-visual **68 fiches** (on concepts, principles, practices, methodologies etc.)
- **Pluralistic yet eclectic** drawing from state-of-the-art
- **Inputs and support** from JRC units (B1, B2, B3, B4, B5, B6, B7, H1, I2) and **Scientific Committee**

5 European start-up village forum

Purpose: To promote entrepreneurship in rural areas
Use: To identify local problems and create sustainable multiple value

On 30 June 2021, the European Commission set out a long-term vision for the EU's rural areas. The vision identifies several areas of action towards **stronger, connected, resilient and prosperous** rural areas by 2040. The vision recognises the role of innovation to help tackle challenges and reap opportunities for wellbeing and growth in rural areas and includes a specific flagship action on research and innovation for rural communities. The **European Start-up Village Forum** is part of this flagship action.

bringing science-based and community-based knowledge and experiences together with high-level political traction, the Forum explores the different **dimensions of rural innovation ecosystems** and discusses insights on the challenges and potentials for **start-up creation and development in rural areas**.

- Do you have similar initiatives in your region?
- Do you support ideas generation among different types of stakeholders?

The Forum complements knowledge exchange and cooperation activities, and work as an open space where institutions and stakeholders can meet, discuss and shape actions and tools for innovation in rural areas. By

Think about how such an initiative could help identify local social problems and deliver multiple value in co-creation with stakeholders involved. Explore more below.

Creating conditions for rural innovation ecosystems

- Mobilising human capital
- Building capabilities and fostering knowledge exchange
- Responsive ways of working for effective innovation policy
- Strengthening institutional and administrative capacity
- Establishing hubs, incubator and accelerator spaces
- Investing in digital infrastructures and skills

6 Sustainable development as a transition

Purpose: To embrace socio-technical systems change
Use: To think of transitions as complex multi-level processes

Dominant socio-technical systems are characterised by individuals, norms, institutions, infrastructures and technologies, which are intertwined and reinforce each other. This leads to lock-ins, path dependency and resistance to change in current systems. Technological green fixes can hide the urgent need for transitioning from current business models to socio-technical systems in line to achieve the SDGs. To this aim, transformations (or transitions) that are more ambitious are needed. For example, new socio-technical systems should enable citizens to engage and contribute to the SDGs beyond their buying choices.

A socio-technical system transition involves social, behavioural and technological change in an interrelated way, so that the end result is change in all elements of the old production and consumption configurations. Can you think about socio-technical systems that require

The Dominant System Facilitate the transition from the dominant system to the emergent system

1. Name the innovation (the new)

2. Connect and build networks

3. Nurture the networks so that they can grow and form communities of practice

4. Illuminate, create new narratives to show the way towards the future

Recycle, reuse and rethink the old to create opportunities

The Emergent System

Outliers, edge cases

The two-loops model advocates to:
(1) name players;
(2) connect them and form networks;
(3) get access to resources and organise;
(4) create new narratives and regulatory towards the new.

Commission

1st Plenary PRI Interregional Cooperation. 14/12/2022 Take Aways

General comments about PRI IC

Long term Political commitment	The unbalanced level of capacities and maturity of cooperating regions.
Capacities	Complexity of instruments
Complexity of managing interregional bureaucracy.	A simultaneous administrative transition is needed

Critical factor for IC

There is a very big spectrum of 'need' from more innovative / developed regions compared to those at the other end of the spectrum

Some territories continue to have very basic needs and have yet to overcome challenges which are related to a (lack of) innovation ecosystem status / culture / capacity within their territories.

Many noted that they cannot begin to consider interregional collaboration until they have improved 'internal' collaboration

Too many EU Instruments

Three Key elements analysed

- Mobilising Funding
- Accelerate transformation of Ecosystems: Services and Networks
- Policies and Tools

Some Ideas

Reflection about what Governance (From connecting to integration)

Long-term pathways for collaboration depending on stage of project or territory

Mapping of funding instruments

Address the Lack of continuity in initiatives such as those born under Horizon Projects

Good experience of ERA-NET and Innovouchers

Importance of shared access to infrastructures

Dedicated budget to through EC Technical Assistance for Coordination

Clustering end-user facilities including VCapitalists

Regional External Investment Plan (EIP) to cooperate outside of your own territory region encouraging regional ecosystem

Data intelligence to prioritize the support to provide is missed.

There is need for support beyond projects for promoting creating European value chains

The role of leadership and human capital

A flexible agile mode of multi-level governance is needed

Exchange of Ideas, experiences to copy in Green Public Procurement, ERDF use...avoid mistakes

SDG Adaptation

Synergies among Agro, Cohesion, Digital, Environmental and consumer policies, both at multilevel governance

Whole of governance

EEN, DIHs rely on existing networks

INSTRUMENTS	COMMENTS
I3	<ul style="list-style-type: none"> - Quite new. Lack of experience - Better for downstream innovation - Require a very challenging set of conditions. It is difficult to understand - Mostly I3 focused more transition for regions in more difficulties and Interreg program is tailored what is should be tackled. - Administrative and work for topical policies. Point of capacities.
Interreg	<ul style="list-style-type: none"> - It provides a good way to set up partnerships on specific topics (but more difficult to involve the private sector) - Instrument used to improve policy, so political commitment is crucial + managing authorities (also including consumer organisations). - Good to make a foundation for other initiatives, analytics. - Takes time to develop a project, finding pieces of existing value chain or creating a new one. - Lower directionality towards transformative innovation - Successful partnerships should be extended beyond the planned project, because of strategic importance of ongoing cooperation afterwards. - Decision making process favours projects with many participants. - Projects create good public resources, but do we know if they make it to the regional agendas? We need statistics for that.
Euroclusters	<ul style="list-style-type: none"> - Companies need assistance to be actively involved. - Boost multistakeholder cooperation but need more capacities and cross-cluster collaboration is not here that is needed in TI - We need more cross cluster and cross sectoral collaboration, new comers to collaboration
Missions	<ul style="list-style-type: none"> - The Missions also bring different sectors and departments together but not sure of intended impact and if the right one for TI;
Deep Tech Valleys	<ul style="list-style-type: none"> - Suggestion to focus not only on “tech” and “deep” innovation (valleys).Social innovation seems to be ignored - The Missions also bring different sectors and departments together but not sure of intended impact and if the right one for TI; same with Deep Tech Valleys and also social innovation seems to be ignored; Horizon Europe
Horizon Europe	<ul style="list-style-type: none"> - The most fitting: private companies and research centres can implement projects with large impacts - Time constrain – many deliverables are condensed in a short period of time. - Resources provided and resources expected are different. - Horizon Europe (European Innovation Eco-systems) also enable multi-stakeholders collaboration but regions not typical actors here; - Partnerships, i.e. the example of M-ERA.NET was considered promising
Other	<ul style="list-style-type: none"> - LIFE programme, ERASMUS+ and Connecting Europe Facility - Regional resouces are not alike. The drives for the issues might be the same, but the issues are different. Synergies ERDF -HE Memorandum of understanding Digitalisation E-Agro DIH LIFE programme

Conclusions

- Need to go beyond the current EU toolkit. The whole spectrum of engagement needs the right tools and systemic approach in place
- Multi-scalar Multi level Governance
- Overlapping of instruments is not likely to boost demand in a way that really delivers improved innovation performance.
- Default 'project' orientation does not help. Partnerships need to navigate and progress through the different stages of interregional collaboration.
- PRI can help to address the disconnect between supply and demand but only if policy makers are truly aware of territorial realities.

Thank you
