CARBONSTACK
FACTSHEET

CarbonStack

CarbonStack is a company that creates forest reforestation initiatives to remove carbon dioxide from the atmosphere and offers businesses sustainable investment opportunities in climate protection projects in different regions. They employ scientific modelling, remote sensing, and climate modelling to determine the carbon capture potential of each project, issue carbon credits, and provide a platform for contributors to visualise and monitor their investments. The company has received grants and seed investments to support its mission.

Bioregions Facility's Forestry Speed Dating is a dynamic event series that promotes innovative solutions in the bioeconomy. Each event fosters sustainable growth in the forestry industry by showcasing innovations where participants can learn, connect and seize new opportunities. This series was made possible with the support of our Bioregions members: Basque Country, Catalonia, and North Rhine-Westphalia.

The European Forest Institute (EFI) coordinates the Bioregions Facility.
