

## Focus topic – Use of recovered wood

### 100détours

100détours seeks to find a second life for the wood of old doors and windows that once removed, were being incinerated or buried in France. This wood, with excellent qualities of durability, resistance and aesthetics allows for many reuses. The proposed solutions range from glued-laminated panels, acoustic panels, interior and exterior furniture, claustras and sunshades, up to micro-architecture: garden sheds, bicycle shelters, and playgrounds. 100détours' mission is to invent qualitative implementations, aesthetically and technically; and has the ambition to participate in the spread of this practice in France.
